# Museums and the Web Hong Kong 2013 Early Registration Opens

Museums and the Web is the largest international conference devoted to art, science, and natural and cultural heritage online. Since 1997 it has hosted 17 events for museum professionals in the USA and features annually the best and most ground-breaking digital work in museums around the world. Its proceedings, freely available online, represent one of the largest archives on digital innovation in the cultural sector, and serve as an important resource for professionals, students and others working with museums: <u>http://museumsandtheweb.us4.list-</u> <u>manage.com/track/click?</u>

 $\underline{u=71f2b910406e41b9c635e9fc4\&id=944f18d146\&e=b49ce1d924}$ 

In 2012 Museums and the Web hosted its first conference in Asia as a special session of NODEM at City University Hong Kong. The 2nd Annual Museums and the Web Asia conference will be held December 9-12, 2013 in Hong Kong, China at the Sheraton Hong Kong Hotel and Towers. MWA2013 will include presentations by leading technologists and museum innovators from Asia Pacific, North America, Europe, and the Middle East.

Sheraton Hong Kong Hotel & Towers is at the top of Kowloon's Golden Mile — near the waterfront on the corner of Nathan Road and Salisbury Road — and is an easy walk to the subway and Star Ferry. MWA2013 has negotiated a special rate of 1900 Hong Kong Dollars or ~\$245 US Dollars for conference attendees. Make your reservation here: <u>http://</u> museumsandtheweb.us4.list-manage1.com/track/click? u=71f2b910406e41b9c635e9fc4&id=bef759f59f&e=b49ce1d924

Early bird rates apply through August 31st, 2013 when you register for Museums and the Web Asia 2013: <u>http://museumsandtheweb.us4.list-</u> manage.com/track/click? u=71f2b910406e41b9c635e9fc4&id=87943c9c8d&e=b49ce1d924

Exhibitors looking to reach museum technologists from around the world are invited to sponsor, advertise, or reserve a space in the exhibit hall. Sponsors and Exhibitors may also propose an Exhibitor Insight session: <a href="http://museumsandtheweb.us4.list-manage1.com/track/click?u=71f2b910406e41b9c635e9fc4&id=981491d84f&e=b49ce1d924">http://museumsandtheweb.us4.list-manage1.com/track/click?u=71f2b910406e41b9c635e9fc4&id=981491d84f&e=b49ce1d924</a> (Note exhibit spaces are limited and will be provided on a first come, first served basis).

#### Bill seeks \$415M for Lake Tahoe projects

#### **SANDRA CHEREB, Associated Press**

The four senators from Nevada and California renewed a push in Congress on Thursday to authorize \$415 million over 10 years to address environmental threats at Lake Tahoe.

Judge signs off on landmark Calif. water accord Associated Press

A California judge has approved the nation's largest farm-to-city water transfer that ends a decade-long dispute over how to divide the state's share of water from the Colorado River.

## WATER LINES: How will Colorado share the Colo. River?

## Hannah Holm, Post Independent

Gov. Hickenlooper's recent Executive Order requiring the completion of a statewide water plan by the end of 2015 has brought new urgency to long-standing discussions about how to meet the state's future water needs

# Climate change on pace to occur 10 times faster than any change recorded in past 65 million years, Stanford scientists say

Not only is the planet undergoing one of the largest climate changes in the past 65 million years, Stanford climate scientists Noah Diffenbaugh and Chris Field report that it's on pace to occur at a rate 10 times faster than any change in that period. Without intervention, this extreme pace could lead to a 5-6 degree Celsius spike in annual temperatures by the end of the century.

## **BJORN CAREY, Stanford University News**

The planet is undergoing one of the largest changes in climate since the dinosaurs went extinct. But what might be even more troubling for humans,

plants and animals is the speed of the change. Stanford climate scientists warn that the likely rate of change over the next century will be at least 10 times quicker than any climate shift in the past 65 million years.

#### 

#### Violence will rise as climate changes, scientists predict

UC Berkeley researchers pull together data on ancient wars, road rage and more, and conclude that violence may increase between now and 2050 because of higher temperatures and extreme rainfall patterns.

#### Monte Morin, Los Angeles Times

Long before scientists began to study global warming, author Raymond Chandler described the violent effects of dry, "oven-hot" Santa Ana winds gusting through the city of Los Angeles.

from delancey.com In today's selection -- over the last few thousand years, contrary to popular belief, the predominate form of money was not gold or silver coins, but instead such things as clay tablets and -- in the case of England -- notched tally sticks. However, metal coins survive more readily than tablets and sticks, and so many historians have falsely assumed that most money was in the form of coins. In the case of England, a lack of understanding of this led to the wholesale destruction of one of the most important collections of source material in the history of money -- and indirectly led to the construction of London's beautiful Houses of Parliament so familiar to us today:

"[Almost all the money that survives] from earlier ages [is] of a single type -- coins. Museums around the world heave with coins, ancient and modern. Coins and their inscriptions are one of the main archaeological sources for the understanding of ancient culture, society, and history. ...

"But of course the ... reason why coins are so important in the study of ancient history, and why they have dominated in particular the study of the history of money, is that coins are what have survived. Coins are made of durable metals -- and very often of imperishable metals, such as gold or silver, which do not rust or corrode. As a result, they tend to survive the ravages of time better than most other things. What is more, coins are valuable. As a result, there has always been a tendency for them to be squirreled away in buried or hidden hoards -- the better to be discovered decades, centuries, or even millennia later by the enterprising historian or numismatist. The problem is that in no field so much as the history of money is an approach fixated upon what physically survives likely to lead us into error. The unfortunate story of the wholesale destruction of one of the most important collections of source material for the history of money ever to have existed shows why. "For more than six hundred years, from the twelfth to the late eighteenth century, the operation of the public finances of England rested on a simple but ingenious piece of accounting technology: the Exchequer tally. A tally was a wooden stick -- usually harvested from the willows that grew along the Thames near the Palace of Westminster. On the stick were inscribed, always with notches in the wood and sometimes also in writing, details of payments made to or from the

Exchequer. Some were receipts for tax payments made by landowners to the Crown. Others referred to transactions in the opposite direction, recording the sums due on loans by the sovereign to prominent subjects. '9£ 4s 4p from Fulk Basset for the farm of Wycombe' reads one that has survived, for example -- relating a debt owed by Fulk Basset, a thirteenth-century Bishop of London, to Henry III. Even bribes seem to have been recorded on Exchequer tallies: one stick in a private collection bears the suspicious-sounding euphemism '13s 4d from William de Tullewyk for the king's good will'.

collection of 13th-century Exchequer "stocks"

"Historians agree that the vast majority of fiscal operations in medieval England must have been carried out using tally sticks; and they suppose that a great dealof monetary exchange was transacted using them as well. A credit with the Exchequer, as recorded on a tally stick, would after all have been welcomed in payment by anyone who had taxes of his own coming due. It is, however, impossible to know for certain.

For although millions of tallies must have been manufactured over the centuries, and though we know for sure that many thousands survived in the Exchequer archives up until the early nineteenth century, only a handful of specimens exist today.

The ultimate culprit for this unfortunate situation is the famous zeal of England's nineteenth-century advocates of administrative reform. ...

"An Act of Parliament of 1782 officially abolished tally sticks as the main means of account-keeping at the Exchequer -- though because certain sinecures still operated on the old system, the Act had to wait almost another half-century, until 1826, to come into effect. But in 1834, the ancient institution of the Receipt of the Exchequer was finally abolished, and the last Exchequer tally replaced by a paper note.

"Once the tally-stick system had finally been abolished, the question arose of what to do with the vast archive of tallies left in the Exchequer. Amongst the partisans of reform the general feeling was that they were nothing but embarrassing relics of the way in which the fiscal accounts of the British Empire had been kept, 'much as Robinson Crusoe kept his calendar on the desert island', and it was decided without hesitation to incinerate them. Twenty years later, Charles Dickens recounted the unfortunate consequences:

'It came to pass that they were burnt in a stove in the House of Lords. The stove, overgorged with these preposterous sticks, set fire to the panelling; the panelling set fire to the House of Lords; the House of Lords set fire to the House of Commons; the two houses were reduced to ashes; architects were called in to build others; we are now in the second million of the cost thereof.' "The Houses of Parliament could be rebuilt, of course -- and were, to leave the splendid Palace of Westminster that stands on the banks of the Thames today. What could not be resurrected from the inferno, however, was the priceless record of England's fiscal and monetary history constituted by the tallies."

Very sorry to hear that Corrine Oneil passed on. She grew up with my mom and her sisters. She would tell me how much fun they had as little girls. She was a relative and a great lady. She will be missed. Thoughts and prayers with her family.

Carolyn Harry

In understanding balance, that one realm cannot exist without the other, it is no surprise that a life blessed with richness of incredible people in it, must also feel the sadness when its time for them to go. This week three incredible cowboys continue that nod out of the box and bucking chute. Wayne Cline, John Hammack, and this morning, my teacher and big brother, Garrett Spoonhunter. So many good times with this crazy, truly one of a kind guy. He will be soooo missed.
