Weekend reading: Living with Water Scarcity, Battling drought: The science of water management, and 40 maps that explain food production in the U.S. <u>Miscellaneous</u>, <u>Sliderbox Posts</u>

by Maven

If you're looking for something different to spend reading on these last days of summer, here are some free (or nearly free) reads you might be interested in:

Living with Water Scarcity

David Zetland, economist and author of the popular blog, Aguanomics, has made his eBook, Living with Water Scarcity, a free download. His bottom line: "Everyone needs to do their part when it comes to managing our water, so I am giving my book to you for free. Your job is to use its ideas to inspire local action and help your community."

Here's the blurb for the book: "Do you worry that there is not enough water for people, the economy and environment? Do you wonder if the water in our taps and rivers is safe or polluted? Do you want to know if farmers waste water, utilities charge too much, or bottled water destroys ecosystems? You're not alone in asking questions. The headlines say "drought, pollution, conflict and insecurity," but the stories offer few solutions. Living with Water Scarcity clarifies the connections among personal and social water flows in an accessible style. It describes the origins and costs of water scarcity and explains how to address it with fair and pragmatic policies. You and your community can live with water scarcity — just manage water as the precious resource it is."

<u>Click here to download the book</u>. You can read more from David Zetland here: <u>Aguanomics.com</u>

Battling Drought: The Science of Water Management

Scientific American is offering the eBook, Battling Drought: The Science of Water Management, for just \$3.99: "The extreme drought in the US Southwest has brought the issues of water use and management to the forefront of media attention. Historically, arguments over water rights have plagued this area since the days of John Wesley Powell, and disputes mark the relations between states, city-dwellers, farmers, and environmentalists to this day. Add to that the challenges of climate change, which is altering rainfall patterns the world over, and the imperative to rethink water management policies becomes acute. This eBook, Battling Drought: The Science of Water Management, takes a long look at the situation in the American Southwest from the early engineering projects, such as building the Hoover and Grand Coulee dams, which were designed to tame the rivers, to the recycling and restoration efforts of today. Projects like the recycling of wastewater in Santa Rosa, CA, and the restoration of the Aral Sea in Central Asia offer both optimism and lessons for change. However, the story of the Himba in Africa – who have, so far, successfully blocked building a dam on a nearby river – illustrates that changing attitudes is often like trying to change the flow of a river. It's an upstream battle. While successful projects like these move us toward that goal, new technologies, methods and crops are still needed to combat diminishing water supplies. A common saying is that someone "spends money like water." Over the last century we've learned that water might be the more precious of the two."

40 maps that explain food production in the United States

Check it out from Vox here: 40 maps that explain food in America

One of my favorite new websites is Vox, whose signature shtick seems to be utilizing a lot of graphics to tell stories. This article, explaining food production through the use of maps, I thought, was quite engaging: "The future of the nations will depend on the manner of how they feed themselves,' wrote the French epicurean Jean Anthelme Brillat-Savarin in 1826. Almost 200 years later, how nations feed themselves has gotten a lot more complicated. That's particularly true in the US, where food insecurity coexists with an obesity crisis, where fast food is everywhere and farmer's markets are spreading, where foodies have never had more power and McDonald's has never had more locations, and where the possibility of a barbecue-based civil war is always near. So here are 40 maps, charts, and graphs that show where our food comes from and how we eat it, with some drinking thrown in for good measure....

Myron Dewey on his Language filming odyssey

<u>Mullan, ID</u> ·

The journey has been a whirlwind, with each visit to the tribes interviewed, the environmental issues are all to important. Being that our Indigenous people have been able to drink out of any river, stream or lake may be a thing of the past. We are witnessing "our generation" an environmental change in water, land, Eco system and also invasive species on our traditional medicines.

I am reflecting the past week of interviews with the tribal leaders, elders, cultural departments and land management teams. They all work hard to articulate how to restore our land and water to its natural state, sending strong blessings to those who live their lives for our environment, clean water and healthy Eco system.

Our tribes across Indian Country are trying to restore our environment to its natural state, we are the care takers of our Mother Earth, take care of her and she will take care of us.

My last interview here was about the superfund site where GOLD was mined. All-though beautiful in color, the extraction is so hazardous to our land....

Mining may seem like the answer at the time for any tribe out of desperation but who will take the water waste and hazardous contaminants off the reservation? The next generation will have to carry on the burden of this generations decisions.

The solution is to create a "non-carbon" foot-print on our Eco-system. Get together ally young intellectual warriors and think of ways our tribes can create economic opportunities that don't leave a carbon foot print, such as:

Tourism Coffee shops Online businesses Beading For just starters, let's create the discussion on healthy alternatives of economic solutions in Indian Country.

Get to thinking and post your ideas...

My journey had taken me the Yakama Nation Tribes language preservation conference. Listening to an elder I know with her powerful words. She is telling her story in their beautiful Yakama language.

Eating Salmon and good food at the Yakama Nation Language Conference. Listening to powerful words of the elders talk about the importance of technology and language, sharing the language, be gentle when sharing the language, create a healthy and good time for our youth to want to participate. Also message to the leaders, your role is to ho protect and find solutions to preservation. Don't cap the language departments with second hand equipment and lack if finding for teaching.

This is the Swan dance revitalized back to life. The youth demonstrated so proudly. So empowering for me to learn more and more about my Paiute and Shoshone ways.

Why the language is important...... *for accompanying videos, go to Myron's FB page.*

AB 52, Native American bill, passes committee with changes08/15/2014_____Consultation process still limited to federally recognized08/15/2014_____By Phillip Molnarpmolnar@montereyherald.com@PhillipMolnar on Twitter

SACRAMENTO >> A bill that has galvanized Native Americans across the state passed out of committee Thursday, setting the stage for a vote on the Senate floor.

In a victory for opponents, the bill was amended to include federally unrecognized tribes into the definition of "Native American tribe."

AB 52 was co-authored by Assemblymen Mike Gatto, D-Los Angeles, and Luis Alejo, D-Watsonville.

The legislation would bolster the rights of federally recognized tribes but had unrecognized tribes concerned their rights were being scaled back.

Morning Star Gali, tribal historic preservation officer for the Pit River Tribe, said the changes are still of concern.

In particular, the bill still states "a meaningful consultation process" will take place between federally recognized California Native American tribal governments and lead agencies — not unrecognized.

"It's not what we wanted," Gali said.

Gali's tribe is federally recognized but has been a leader opposing the bill because of concern for tribes still petitioning for recognition.

There are three unrecognized tribes in Monterey County.

The bill was championed as a way to elevate federally recognized tribes to the same status as other government entities and force every project, under the California Environmental Quality Act, to be reviewed by the Native American Heritage Commission.

An online petition on <u>Causes.com</u> to oppose AB 52 (bit.ly/108tGIB) had 7,332 signatures Friday afternoon.

There are 110 federally recognized tribes in California and 78 tribal communities petitioning for recognition, according to the Judicial Council of California.

The bill will be heard by the state Senate sometime before Aug. 31 and, if passed, goes to Gov. Jerry Brown's desk.

It still faces opposition from business groups, such as the California Association of Realtors and California Railroad Industry, for adding new restrictions to development.

"The current language presents significant obstacles for new public and private development across the state and opens up new avenues for CEQA litigation," read a June 19 letter to the state Senate signed by 18 business groups.

One of the cornerstones of **Native Seeds/SEARCH** is our active membership community, whose critical support helps make our work possible. Today we are announcing a new benefit for NS/S members, complementing our traditional benefits.

Starting on **Friday, August 15th**, we will be making a large number of varieties from the NS/S Seed Bank collection exclusively available to NS/S members and <u>Native American Free Seed</u> recipients. This increases the crop diversity that we can make accessible by extending limited seed stocks and increasing public support for our conservation efforts.

New and current members will now receive:

- Access to seeds that are in low supply and otherwise unavailable
- The Seedhead News, our newsletter published three times each year
- Our annual seedlisting catalog
- A 10% discount on all product purchases (online, mail order and retail)
- Discounted tuition for workshops and courses
- Special members-only email promotions, including discounts for web orders
- Invitations to special events at our Seed Bank, Conservation Farm and Store
- Early access to NS/S plant sales

In addition to our normal annual memberships (now starting at \$35), we are also offering Student/Low Income memberships for \$20 to help those in need. We continue to offer free or discounted memberships to Native American individuals in the Southwest and beyond. You can become a new KC member or renew an existing membership online.

Thank you for joining us!

For Coast Commission, a little history is in order

U-T San Diego

Across the coastal highway from the beach at Carlsbad, adjacent to the old Encina Power Plant, a seawater desalination plant is taking shape. This \$900 million project is months ahead of schedule, more than 60 percent complete, and, when operational late next summer, it will be the largest and most technologically advanced desalination plant in the Western Hemisphere. It will provide 50 million gallons of water a day for San Diego County. Reliable water, not dependent on the Colorado River or Northern California or the mercies of the heavens or the Metropolitan Water District of Southern California. Drought-proof water.
