**Today's selection -- from *Citizen Sherman* by Michael Fellman.** Almost three million soldiers had enlisted in the American Civil War. By contrast, it only took 25,000 soldiers after that to prosecute America's tragic war to subdue the Indians (Native Americans) in the West, largely because much of this terrible work was done by disease, settlement, and the slaughter of the buffalo. This ignominious war, in many respects over by time of the death of Sitting Bull in 1890, was led by the triumvirate of the most successful generals of the Civil War, President Ulysses Grant, William Tecumseh Sherman, and Philip Sheridan:

"With the south at last subdued, American public energies could return to the long-term project of economic development and westward expansion. ... The key to the realization of this

great national and international project, which was the American version of the shared expansionist dream of the Western world, was the transcontinental railroad. The chief impediment to this objective was the nomadic, buffalo-hunting, warlike Indians of the Great Plains, with whom white Americans were convinced they never could cohabit. They would have to be dealt with while the railroads were abuilding. And they would be combatted only by a small army, as Congress reduced it to fifty thousand, then to thirty-five thousand, and finally to twenty-five thousand in the first few postwar years. ...

"When pushed by this or that incident, [General William Tecumseh] Sherman's racial contempt would emerge through his more distancing natural law justifications. 'We are not going to let a few thieving, ragged Indians check and stop the progress of [the railroads], a work of national and world-wide importance,' he insisted to Grant in 1867... Sherman noted to Grant that 'increased [U.S.] population [migrating West] ... will divide the northern and southern Indians permanently, when [the army] can take them in detail.'

"Disease, slaughter of the buffalo, their economic base, and intrusion of white settlement, together with the extermination of the most war-like younger men, all were serving to eliminate the Indians. The cap-stone, literally uniting the white surge, was, as Sherman had always believed it would be, the railroad. Railroads began to move settlers west, and goods, like wheat and buffalo hides, to market. They also made the small army far more mobile and capable of concentration in their attacks on the shrinking bands of 'hostile' Indians. The army was able to guard the railroads so effectively that raiding Indians failed to slow construction. ... With the Union Pacific through, and three more lines to follow in swift succession, with all their attendant social, economic, and racial ramifications, Sherman could shove the Indians out of his mind while he and Progress were in the process of finishing them off on the ground.

"The remaining Indians were nearing starvation. 'I think the Sioux are now so dependent on us that they will have to do whatever they are required to do,' Sherman told Sheridan triumphantly and only slightly prematurely, on November 20, 1875. After a bit more mopping up he could believe he had achieved the final solution to the Indian problem as he had defined it a decade earlier -- extermination for the hostile; reduction to dependency in out-of-the-way reservations for the rest. And it really had been cheap in white soldiers' lives: From 1867 to 1884, 565 officers and men were killed and 691 wounded, far less than in an average Civil War battle. Financially as well, the war had proved no great drain on the treasury: 'It is all moonshine about the great cost of the war,' Sherman bragged to a friend in 1875."

## Tentative Agenda

### Corporate Track

- Corporate Structures 101
- Corporate Structures 201: Corporate Board Development
- Attracting Business Partners
- Feasibility Analysis and Project Development
- Financing Economic Development
- Cooperatives: A Choice for Business Structure
- Doing Business with the Government - 8(A) Corporations and Contracting
- Tourism/Hunting/Fishing as Economic Development
- Energy and Sand/Gravel Development as Economic Development
- Travel Centers: Managing and Maximizing Roadside Opportunities
- Gaming and Casino Development
- Indoor Agriculture: Economic Development

### Leadership Track

- Tribal Finance Issues: Managing Expenditures and Revenues
- The Role of the Council or Board Member in Economic Development
- The Executive Team Approach
- Strategic Tribal Planning: Building Communities
- Taxation and Utility Assessments as Revenue Streams
- Human Resources: Policy, Practices, and Workforce Development

### Agriculture Track

- Financing Opportunities for Ag Producers
- Ag Cooperatives: Native American Branding, Marketing, and Sales
- Alfalfa and Cattle Management and Markets
- Value Added Works/Growing in Hoop Houses
- Organic Certification

### Entrepreneurship Track - Monday Only

- Are You Ready for Starting or Growing Your Business?
- Money: Where to Get It and How to Manage It
- Customers: Where do You Find Them and How Do You Keep Them

## Travois Museum anyone?

### WWII PLANES FLY IN TO HENDERSON AS PART OF TRAVELING MUSEUM TOUR

The B-29 Superfortress bomber is one of several World War II planes stationed at the Henderson Executive Airport on Wednesday through Sunday for the public to tour as part of the third Commemorative Air Force Airpower History tour.

## How Indian and Blacks got to be 3/5 persons

George Will gives us a history lesson

In a column this week on Nevada's U.S. senate race, George Will wrote, "Nevada, which calls itself the Battle Born State, actually was born prematurely because of Republicans' anxiety. Now, 152 years later, it again is a subject of their anxiety. Entering 1864, Abraham Lincoln and his party were intensely, and reasonably, in doubt about his re-election. So, scrambling for every electorate vote, Republicans decided to conjure three from thin air—thin desert air. They began the process of admitting Nevada to the union, even though the 1860 census said its population was 6,857, far short of the 60,000 ostensibly required for statehood. Nine days before the election, the Republican-controlled Congress made Nevada a state (although Gen. Sherman's Sept. 2 capture of Atlanta probably guaranteed Lincoln's victory)."

*Eight* days. And Congress wasn't even in session at the time. It was Lincoln, not Congress, that acted on October 31. Congress had already authorized statehood in March, leaving it to the president to decide when to admit Nevada to the union after Nevada submitted an acceptable constitution. That turned out to be October 31. To be sure, Lincoln wanted the new state admitted to the union before the election. On an October 13 visit to the State Department telegraph room where he often hung out with cronies to relax, Lincoln listed eight states with 114 electoral votes that he expected to lose to Democrat George McClellan and ten states plus New England with 117 votes that he expected to carry against McClellan, and Major Thomas Eckert predicted that Lincoln could add Nevada's three votes if it completed its statehood tasks before election day.

But the president couldn't just sign a paper admitting the new state. Its constitution had to contain certain provisions, and the state held one constitutional convention that drafted a document that Nevadans then voted down. A second constitutional convention drafted another constitution that did pass muster with the voters. The entire document was wired to D.C. at a cost of \$3,416.77 (\$52,565.69 in 2015 dollars). That enabled Lincoln, not Congress (which was in recess from July 4 1864 to December 5 1864), to make Nevada a state on Halloween.
