More activists from Reno leave for Standing Rock

[Jose Olivares](#), Reno Gazette-Journal 11:09 p.m. PDT September 20, 2016

More activists from Reno are leaving for North Dakota to support the Standing Rock Sioux tribe in their fight against the Dakota Access Pipeline. A Tuesday evening event, featuring Gloria Steinem, Dr. Debra Harry and other speakers, hosted a large crowd in downtown Reno. Volunteers gathered monetary donations and supplies before the activists leave on Wednesday.

On Tuesday evening, over 80 people gathered at the Reno City Plaza to protest in support of the Standing Rock Sioux tribe. Banners and posters were held while various speakers addressed the situation revolving around the Standing Rock Sioux tribe and their fight against the Dakota Access Pipeline.

Gloria Steinem, a feminist activist, spoke at Tuesday's event after [speaking in support](#) of Democratic presidential candidate Hillary Clinton in Reno earlier in the day. She quickly left for another event after addressing her support of the national movement against the oil pipeline.

The Clinton campaign has not yet taken a position on the pipeline's construction or the subsequent conflict.

The Dakota Access Pipeline and its subsequent opposition has been the subject of much controversy. In April of this year, protesters from the Standing Rock Sioux tribe began mobilizing and blocking construction of the pipeline, which would cross under the Missouri River. Standing Rock Sioux land is located half a mile south of the pipeline.

Once completed, the 3.8 billion dollar pipeline was supposed to carry 570,000 barrels of crude oil. Anti-pipeline activists and American Indian organizers say the oil pipeline would contaminate the Missouri River, which is Standing Rock's only water source.

The fight against the oil pipeline began generating attention after supporters from all over the world began to gather at Standing Rock. On Sept. 4, Democracy Now! reported the Dakota Access Pipeline company security [attacked activists with dogs](#) and pepper spray as they protested its construction.

On Sept. 9, the U.S. Department of Justice [temporarily halted construction](#) of the company, asking the company to "voluntarily pause all construction activity" until it could be determined whether the construction was violating or following federal laws.

People in opposition to the pipeline claim there is a high risk for an oil leak or spill, which could negatively affect the environment. Just last week, an [Alabama pipeline experienced a rupture](#), raising concerns for its environmental effects.

Activists from all over the U.S. and world have been visiting Standing Rock, with Reno sending its own share of supporters. Earlier this month, [a truck with supplies left Reno](#) and drove to North Dakota in support of the movement.

University of Nevada, Reno professor and local activist Dr. Debra Harry from Pyramid Lake was recently at Standing Rock.

"It's a beautiful encampment of indigenous people from all over the world," Harry said. "The community itself is peaceful, it's culturally grounded."

"And they're all there for one purpose: to stand and protect the water, not only for themselves, but for all people of our future generations, and to stop the destruction of sacred places, burial sites and other special places we all need to survive," Harry added.

Harry had traveled to Standing Rock with a delegation of indigenous rights experts to develop a treaty between indigenous nations in the U.S. The treaty was a commitment for indigenous nations to divest from any corporations supporting the Dakota Access Pipeline. According to Harry, there are currently 288 indigenous nations planning to divest from banks and companies.

“With the treaty, the Standing Rock Dakota Nation and its allied nations will use their economic power to put pressure on, and negatively financially impact the Dakota Access Pipeline construction,” Harry said.

According to a [recent investigation](#) by corporate watchdog organization LittleSis, there are many corporate supporters of Energy Transfer Partners, L.P., the company developing the Dakota Access Pipeline. Some economic supporters include Morgan Stanley, JPMorgan Chase & Co and Wells Fargo & Company, among others.

Local activists will be leaving on Wednesday evening and are planning to arrive at Standing Rock on Friday. Among them is Kyle Chandler Isacksen with the Be The Change project. Isacksen, his wife and his children will be traveling to North Dakota with supplies for the protesters at Standing Rock.

According to Isacksen, they will be taking a truck with a solar charging station, winter clothing, tents, sleeping bags and food. They have collected over 3,000 dollars for the Standing Rock Sioux tribe. Isacksen says there will be approximately seven to eight people leaving.

"It's about human rights. It's about dignity," Isacksen said. "It's about not having to sacrifice people and sacrifice places. It's just this combination of all these struggles for justice."

Although North Dakota is far from Nevada, Harry and Isacksen see the struggle as an historic event people all over the world should pay attention to.

"Obviously, the basic human rights of people should matter," Harry said. "People should care when there's an injustice. But even bigger than that, all people are going to be affected by a lack of access to clean water."

Grant Opportunity for CAIs

Mobile Beacon is offering grants to community anchor institutions (CAIs) to be used toward building localized digital inclusion programs.

Applications for Mobile Beacon's **Wi-Fly Lending Launch Kit** grant are being accepted through September 30, 2016. The grant gives local community organizations the initial tools needed to create their own digital inclusion programs and serve the evolving digital needs of their communities.

Each Wi-Fly Lending Launch Kit grant has an estimated donation value of \$20,000 and includes:

- 25 donated 4G hotspots
- Free, unlimited LTE data plans for each hotspot during the pilot program
- 25 donated Lenovo Thinkpad E560 laptops

EPA Offers up to \$80,000 to Communities to Develop Air Sensor Data Best Practices

The challenge is open until October 28

The **[Smart City Air Challenge](#)** encourages communities to install hundreds of air quality sensors and manage the resulting data. EPA is offering two communities up to \$40,000 each to work with their residents to crowdsource air quality data and share it with the public online. The projects will give individuals a role in collecting the data and understanding how environmental conditions affect their health and their community.

- **Application Deadline:** October 28, 2016
- **Announcement of Winners:** Around December 1, 2016
- **Initial award:** Up to \$40,000 each to two communities to deploy air sensors, share data with the public, and develop data management best practices from sensors
- **Additional funding:** Up to \$10,000 each to the winning communities in 2017 based on their accomplishments and collaboration

Air quality sensors are becoming less expensive and people are beginning to use them to measure pollution levels in their neighborhoods and homes. They're developing rapidly, but most sensors aren't ready for regulatory use. However, by networking these devices, communities can better understand what is happening at the local level. Communities will figure out where to place the sensors and how to maintain the devices. It's up to each community to decide what pollutants they want to measure.

The prize funds serve as seed money, so communities will need to partner with other parties, such as sensor manufacturers, data management companies and universities. These partners can provide resources and expertise in topics where communities lack experience. In doing so, communities will learn how to use data analytics, which can be applied to other aspects of community life.

Learn your language.

Native guy is carrying a book about learning the Mohawk language. Older settler says "Why you wanna learn your language? Ain't no good in today's society."

Mohawk guy says "So when I get to the Creators land, I can speak to my relatives."

Settler thinks about it then says, "What if you go to hell?"

Mohawk guy thinks then says "No worries there. I already know English."

Please spread the word. For more information, visit the [Smart City Air Challenge website](#) and our [blog post](#). You can also write to [Ethan McMahon](#) or

smartcityairchallenge@epa.gov.

SETDA Releases Latest School Broadband Connectivity Report

The State Education Technology Directors Association (SETDA) has released a new report on school broadband connectivity titled **The Broadband Imperative II**. The report recommends increases in infrastructure to support student-centered learning, designing infrastructure that meets rigorous capacity targets, ensures that all students can have Internet access both at and outside of school, and leveraging state-level resources to increase broadband access and adoption. The new report looks at educational technology trends and needs and recommends doubling this capacity to 2 Gbps for every 1,000 users by the 2020-21 school year. The report also recommended increased actions by local school districts to provide off-campus connectivity options to students without broadband at home. [Read the Report](#)

Birdsinging to Open CalArts' Wild Beast Concert Series

An evening of Native American Birdsinging will launch the 2016-17 season of the Wild Beast Concert Series at California Institute of the Arts (CalArts). Elders Wally Antone (Quechan) and Walter Holmes, Jr. (Cahuilla) will perform traditional Birdsongs. Derek Duro (Cahuilla) and the Torres Martinez Desert Cahuilla Indians will represent the renewed interest in this musical and cultural legacy among younger generations.

The open-air screening and concert take place on Saturday, October 1, 2016 at 7 p.m. at the Wild Beast music pavilion on the CalArts campus. Hosted by the Herb Alpert School of Music at CalArts, the Wild Beast Concert Series is free and open to the public. Reservations are suggested.

The Birdsinging traditions of the native tribes of Southern California are among the most significant expressions of Native American oral history and among the most important legacies of world music. Before the musicians take the stage to perform Cahuilla Birdsongs, there will be a screening of *We Are Birds: A California Indian Story*, a documentary that chronicles the resurgence of the tradition through the eyes of Bird singers, dancers, elders, and cultural preservationists.

Salmon King Fisheries added [25 new photos](#).

Had the privileged opportunity to shoot an episode for Bizarre Foods with Andrew Zimmern for a few days - photo, video and audio. The focus was our fishery, our business, my beadwork and traditional foods. We ended this fantastic journey at my gramz longhouse in Seekseequa. My nephews Rolin and Neal brought their big drum, Andrew sat and drummed with them. The meal prepared by all of our family was salmon, steelhead, coho, sturgeon- dried, BBQ, pulverized, smoked, canned-fillets, bellies, heads, eels-baked, bbq'd, dried, smelt, backbones, eggs, deer, elk - canned, 4 kinds of roots, huckleberries, choke cherries , my moms biscuits and water. I believe it'll air in January 2017.
