A study by the University of California – Santa Cruz found that **nature-based solutions are among the most cost-effective ways to prevent flooding** along the U.S. Gulf Coast.

Researchers predict that natural solutions, including restoration of marshes and oyster reefs, could prevent up to \$50 billion in Gulf Coast damages. [Science Daily](#)

**Sunnyside Gold Corp. has accused the U.S. EPA of failing to operate a treatment plant at full capacity**, allowing large volumes of mining wastewater to flow into a southwestern Colorado river. The EPA, which is fighting with Sunnyside over who should fund the first steps in a nearby Superfund cleanup, has not yet responded to the allegations. [The Denver Post](#)

**[Fear and Fury in Michigan Town Where Air Force Contaminated Water](#)** – Some residents can't drink the water or eat the fish. Now they're organizing.

**In the U.S., the New Mexico Court of Appeals last week upheld a major legal settlement allocating water rights from the state's largest river to the Navajo Nation.**

Over 20 community water and irrigation districts in the San Juan River basin had challenged the settlement, which Congress approved in 2009. They argued that water from the San Juan River isn't needed for troubled Navajo irrigation systems. The appeals court said that the Indian tribes were not obligated to prove immediate beneficial use of the water.

An attorney for the irrigation groups says they will appeal to the state Supreme Court, saying that the ruling to uphold the settlement "destroys New Mexico's remaining water supply." (April 9 Circle of Blue)

## Records request upheld

By **Dennis Myers**    [dennism@newsreview.com](mailto:dennism@newsreview.com)

The Nevada Supreme Court has unanimously reversed a decision by a district court judge who ruled that public records on private devices need not be turned over to the public.

The case involved ongoing disputes between Comstock Lode residents and Comstock Mining Inc., plus members of the Lyon County Board of Commissioners.

After a 2013 vote on zoning for development, the Comstock Residents Association filed a public records request for records in public custody and also private phone records and emails by county commissioners. Lyon County supplied the records it held and some public records created on private devices. The CRA filed suit to obtain the rest of the records.

Retired Washoe County Judge Steven Kosach, who sat on the case, ruled that the public records held privately need not be turned over.

Lyon County had argued that because state law requires that public records must be “open at all times during office hours,” this requirement identifies what records are public. Kosach agreed.

But the Supreme Court said, in effect, that when officials create government records on private devices, the public’s interest follows those records onto the devices, so officials may not avoid disclosure simply by switching from public to private equipment. The justices pointed to two previous cases, one involving Clark County Detention Center call records and another dealing with Gov. Jim Gibbons’ emails, to point out that they have previously “compelled the production of public records where they have been in the possession of private parties.”

Lyon County also contended that it does not have custody of the privately created public records, and Kosach supported that argument.

But the justices noted that Nevada Revised Statute 239.005 reads in part that the statutory term “governmental entity” includes “An elected or appointed officer of this State or of a political subdivision of this State.”

Therefore, the justices found, the commissioners who created the public records on their private devices “are government entities ... and their custody of the requested records would satisfy the requirement of legal custody” under the law.

Finally, the county argued that the public records on private devices were not official records and were not paid for with public funds. (The devices were not supplied to the commissioners by the county.)

The court did not directly address these issues but said its analysis on the issue of whether the records on private devices also applied to the issues of whether the records are official and whether private property rights interfere with delivery of the records to the public.

The court conceded that public records may be mixed in with private records, but said they can be sorted out at the district court level.

The court vote was 7-0. The ruling can be read at [nvcourts.gov/supreme](http://nvcourts.gov/supreme).

Edited

### **Speak Out Against Fracking**

Join Guardians Now and Stand Against the Destruction of Chaco Canyon Egypt has its pyramids. Peru has Machu Picchu. America has Chaco Canyon and the Greater Chaco landscape, one of our few cultural UNESCO World Heritage Sites.

But instead of being celebrated as a sacred ground, the Chaco region is being sacrificed for fossil fuels, and the whole Four Corners region is suffocating under our nation's largest methane cloud. Drilling has crept to the very doorstep of Chaco Canyon and the entire living cultural landscape is being destroyed piecemeal.

You can help save this irreplaceable region by supporting Guardians' defense of the Chaco region today.

The Bureau of Land Management orchestrates this destruction and is in the pocket of the oil and gas industry, openly admitting it ignores the impacts of industrialized fracking. Despite protests, they continue to lease public and tribal lands for fracking. Our government has failed us, especially the indigenous communities whose origin stories are tied to the Greater Chaco region.

Due to our unrelenting defense, last month Interior Secretary Zinke cancelled an upcoming sale of 4,434 acres of the Greater Chaco landscape and, just last week, we scored another major win in federal court. Our collective voices have grown so loud that Zinke can't ignore our protests any longer.

Now we need to build on the momentum from these recent reprieves and demand our leaders protect this sacred land. Join Guardians now and stand against the destruction of our collective heritage and future of our climate.

John Horning, Executive Director [Email John](#)

## Bow the Slakes t'Me on Pyramid looks Twenty-Ave Y

Twenty-five years ago one bright morning in the early spring Lem Savage and Dave Scott started down the Truckee in a flat-bottomed scow for the purpose of having a glorious jollification on the blue waters of Pyramid Lake. They were not exceptional pioneers, and, as a matter of course, they fortified themselves against the dangers of the journey by taking with theJ:n a ten-gallon jugof whiskey. They made the lake all right but their "lightning" was all gone.

They concluded they could not have any pleasure without some of that "stuf," so they sent an Indian back to Glendale for another supply. When that had a1so disappeared they went down to the shore for a bath and when through went to put on their boots. But they didn't-they

were tun of squirming snakes- the boots we mean-the boys put for the hills and traveled as fast as they could go until they reached home.

The 20 gallons started a colony of "rattlers" which has gained a world-wide celebrity. They are there in the millions and the rocks in the center of Pyramid Lake, where Lem and Dave pulled off their boots, will stand as a warning to drinkers of poor whiskey. Don't credit Tom Hymers with this yam, because he tells nothing but the truth.
