Supreme Court OKs Climate Change Lawsuit Against US Government

Lucille George

<u>Carolyn Harry</u> shared a memory. As our good friend <u>Robert Cook</u>, former President of the National Indian Education Association said, "I vote because my grandparents and parents were born as non citizens on their own Indigenous lands, I vote because my dad and mom were denied the right to vote because they were Native, I vote because local accessible voting districts are denied to Black and Brown citizens. I vote because my heroes died and were attacked for this right for me." Please, please vote. Even if you don't believe in the system, even if you think your one vote doesn't matter.. remember them.. your vote matters

North Dakota's Voter ID Law Disproportionately Affects Native Americans. Here's How They're Mobilizing to Fight It

Katie Reilly, Time

Reilly writes: "OJ Semans has been driving nearly a thousand miles through North Dakota Indian Country to mobilize voters and troubleshoot voting hurdles in the final days before the 2018 midterm elections."

Rick Perry's truth-telling gaffe could flip Nevada Senate seat to Dems Aldous J Pennyfarthing

Donald Trump's pre-midterm lie-athon has mostly gone off without a hitch, if you ignore the abject stupidity of all those lies. (Not sure why we even need to talk about protecting people with preexisting conditions since <u>Trump long ago promised a universal health care system.</u>)

But now his energy secretary, Rick Perry — about whom Trump once said "he should be forced to take an IQ test before being allowed to enter the GOP debate" — has spilled the beans on one of Trump's most brazen lies. And it could end up hurting the reelection prospects of Sen. Dean Heller (R-Nevada) in a race that FiveThirtyEight currently rates as a toss-up.

But first, here's the background. For some reason, Nevadans don't want all the country's nuclear waste dumped in their state. But Trump does. Of course, Trump being Trump, he doesn't want Nevadans to *know* that he wants them to take all our nuclear waste because Heller is embroiled in a tough reelection battle with Democrat Jacky Rosen. So -gasp! — he lied.

From ThinkProgress:

One thing that unites Nevadans is opposition to President Donald Trump's effort to turn the state into a huge nuclear waste dump.

That's why many were surprised when <u>Trump suggested</u> he might abandon that policy after touring the state recently with GOP Senator Dean Heller, who is in a tight reelection race against Democrat Jacky Rose

But Trump's Energy Secretary, Rick Perry, admitted on Friday the administration still supports building the Yucca Mountain nuclear waste repository outside of Las Vegas.

In doing so, Perry effectively spoiled Trump's effort to help Heller, as Jon Ralston, editor of the Nevada Independent, <u>explained to Bloomberg</u>: "Poor Rick Perry didn't get the memo and accidentally told the truth."

Seems that the federal government long ago designated Nevada — specifically Yucca Mountain, which is 90 miles outside of Las Vegas — as its nuclear waste pit, and George W. Bush's administration took several steps to move that plan forward. But after Nevada's Harry Reid became Senate majority leader and Barack Obama became president, the plan stalled.

Trump revived it — and now he's fervently pretending that he didn't.

It's unsurprising then that Trump made a lot of news when he appears to reverse course and <u>told</u> a <u>Nevada radio station</u> on October 20, "I think you should do things where people want them to happen, so I would be very inclined to be against it." He added, "We will be looking at it very seriously over the next few weeks, and I agree with the people of Nevada."

. . .

Many were skeptical of Trump's Yucca statement. After all, Trump was the one who proposed reviving Yucca in the first place.

So it wasn't entirely a shock when Perry said a week later on October 26, that "yes" the administration <u>still supports opening Yucca</u>. Indeed, Perry pointed out, "I'm making this presumption by looking at a budgeting process and there was money in the president's budget to manage Yucca."

D'oh!

Wait, maybe Trump's plan to protect people with preexisting conditions is to give them all a free stay in Yucca Mountain for experimental radiation therapy.

When I first came back home, I met this amazing family from the Fallon Paiute Shoshone Tribe.

At the time, Everett George and his twin brother, Dwight, were just finishing high school.

Now, Everett is playwright and his work has been produced at the 2018 Young Native Storyteller Festival at Yale University.

Attached is information on Everett's latest project. He'll be doing a "reading" at the Bruka Theatre in Reno on November 10.

Please support this young Native American artist and go see his show.

Know that he touches on difficult subjects, but his portrayal of Indian County is authentic, raw, and often conveyed with humor. I understand in Numu Yadooai, the Tribal youth kidnap the owner of the local liquor store to help end the rampant alcoholism that is tearing apart their community. Also, know that this is PG rated.

Thank you for your consideration.

Stacey Montooth

Someone's Missing: 6 Southern Nevada jurisdictions sign joint 'Smart Community Vision' By Chris Teale

All six jurisdictions in Southern Nevada — Boulder City, Clark County, Henderson City, Las Vegas, Mesquite City and North Las Vegas — adopted the "Southern Nevada Smart Community Vision," a unified vision to help guide the introduction of new technological solutions.

Coordinated by the Regional Transportation Commission of Southern Nevada (RTC), the vision has three main pillars: to improve the region's quality of life, infrastructure and sustainability. RTC said the jurisdictions came together to adopt the vision to increase public sector efficiency, help economic growth and improve residents' quality of life.

"The [vision] helps provide a blueprint for continued coordination and cooperation among the RTC, the Nevada Department of Transportation (NDOT), local entities, and other public-sector agencies like the Las Vegas Valley Water District as they work with various private-industry companies to leverage advanced technology to build a smarter and more connected Southern Nevada," RTC said in a statement.

"We are now witnessing the highest levels of displacement on record. An unprecedented 68.5 million people around the world have been forced from home. Among them are nearly 25.4 million refugees, over half of whom are under the age of 18." – The United Nations Refugee Agenc

Some wise words from Eric Hoffler - insert "Computer" for "machine""

To know the central problem of an age is to have our fingers on a thread of continuity through the welter of willful events and unforeseen crises. It is my assumption that the main difficulty and challenge of our age is drastic change - from backwardness to modernity, from subjection to equality, from poverty to affluence, from work to leisure. These are all highly desirable changes, changes that mankind has hoped and prayed for through the millennia., Yet it is becoming evident that, no matter how desirable, drastic change is the most difficult and dangerous experience mankind has undergone. We are

discovering that broken habits can be more painful and crippling than broken bones, and that disintegrating values may have as deadly fallout as disintegrating atoms.

Eric Hoffer, the Temper Our Time, (1965)

We are up against the great paradox of the twentieth century: namely, that a break neck technological advance has gone hand in hand with a return to tribalism, charismatic leaders, medicine men, credulity, and tribal wars. The tendency has been to blame the machine. It is true that in the early decades of the Industrial Revolution, when men, women and children had to be dovetailed with iron

and steam, the factories were agencies of dehumanization, But we of the present know that communion with machines does no blunt our sensibilities or stifle individuality.

The banishing of workers by automation from factories, warehouses, docks, etc. will fill the cities with millions of unemployed workers waiting for something to happen. Condemned to inaction and deprived of a sense of usefulness and worth, they will become receptive to extremism, and to political and racial intolerance.

What is it that society needs above all when it has to adjust itself to wholly new conditions? It needs utmost flexibility, a high degree of human plasticity.

At "press time", this distressing post; no other information yet.
