With colorful speckles, beautiful olive eyes, and a call that sounds like a baby bird, Dixie Valley toads are a unique emblem of Nevada's biodiversity. One of the smallest North American toad species, they also have a small range: a single hot-spring-fed wetland in the mostly dry Great Basin. Now a geothermal energy company wants to build a power plant that could dry up this desert oasis and wipe out these tiny residents.

The U.S. Fish and Wildlife Service can save Dixie Valley toads, but it needs to hear from you.

In a landmark win by the Center for Biological Diversity, the Service recently protected the toads under the Endangered Species Act — but only on a temporary, emergency basis. While the agency considers full, permanent protection, it's taking public comments to help guide the decision.

<u>Tell the Service to finalize permanent protection that could stop the power plant and save these little amphibians.</u>

In Mexico City, Aztec-Era Floating Gardens Offer a Path to Sustainable Eating

Xochimilco, largely known to travelers for its colorful party boats, has been an important food source during the pandemic. By <u>MEGAN ZHANG</u> April 29, 2021

To my "salmon peeps"; please weigh in:

The U.S. has spent more than \$2 billion to save salmon. The fish are vanishing anyway.

The U.S. government promised Native tribes in the Pacific Northwest that they could keep fishing as they'd always done. But instead of preserving wild salmon, it propped up a failing system of hatcheries. Now, that system is falling apart. Read in ProPublica: <u>https://apple.news/AVa4ej9BLQ1CHy4rbhn-d8w</u>

Sugar Pine Foundation. sugarpinefoundation.org

Sugar pines (Pinus lambertiana, simt'á:gɨm in Washo) are the world's largest species of pine and have the longest cones, but they are dying faster than they can regenerate from white pine blister rust, a non-native, invasive fungus; as well as impacts from mountain pine beetles, climate change, and historical logging practices.

Once comprising 25% of Lake Tahoe's forests, sugar pines now make up less than 5% of the forest composition. The Sugar Pine Foundation finds trees that are resistant to the fungus, then collects their cones and plants their progeny to restore Sierra Nevada forests.

Regeneration of Abandoned Farmland Can Mitigate Climate Change, Study Finds

Cristen Hemingway Jaynes, EcoWatch

Jaynes writes: "Increasingly, farmers around the world are moving into urban centers in an act called 'rural outmigration,' leaving hundreds of millions of acres of land to be reclaimed by the Earth."

Seaside towns offers free beach passes to Native Americans

By PHILIP MARCELO

.....He says securing beach access is a small way to make sure tribes' "aboriginal rights" to waterways are respected.

"It's definitely appreciated after 400 years of colonization and gentrification," Weeden said. "It's a step in the right direction, given what they've done to our people. At the same time, we have a long way to go."

When Did Humans Domesticate the Horse?

Lakota People's Law Project

Take 30 seconds to help us get Indigenous history like this taught in schools <u>https://</u>lakota.law/3xAH2HK

Despite the Declaration of Independence describing the indigenous people of Turtle Island as "Merciless Indian Savages," it might surprise many to know that much of the U.S. Constitution was inspired by the "Great League of Peace" founded by the Iroquois Confederacy.

The Iroquois Confederacy is the oldest living participatory democracy on earth. It initially united five nations: the Mohawks, the Onondaga, the Cayuga, the Oneida, and the Seneca. Over 300 years later, the Tuscarora nation joined the Iroquois, and the six nations formed a multi-state government while maintaining their separate governance.

In October 1998, Congress passed a resolution (H.Con.Res.331) acknowledging the influence of the Iroquois Confederacy on the U.S. Constitution.

Ben Franklin met with Colonial and Iroquois leaders in 1754 to discuss how the colonies might govern themselves. During that meeting, a Mohawk chief showed them the strength of the Iroquois Confederacy by holding up one arrow and breaking it. He then held up five arrows tied together and showed that they could not be broken because of the combined power, just like the Confederacy.

After the U.S. was established, Franklin replaced the original imperial eagle with the bald eagle on the U.S. seal to represent the Iroquois Confederacy. He added 13 arrows to symbolize the strength of the colonies together in unity.

UNR Hall Of Fame Member:

Joe Bliss - Class 1960 Induction 1973. Sport(s). Boxing Boxing (1959-60)

A native of Lovelock, Nev., Joe Bliss won the second individual national title in school history and the first in boxing, capturing the 139-pound title in 1959. He reached the championship round in three straight years. A member of the Pauite tribe, Bliss was a five-sport star at Pershing County High School in Lovelock and was making a run to qualify for the U.S. Olympic Boxing Team before being drafted into the United States Army in 1953. He served for two years in Germany during the Korean War and continued to box while in the Army. He enrolled at the University of Nevada in the late 1950s and quickly because Nevada's first great boxer. As a sophomore, he reached the national championship round in the 139 pound weight class, losing a split decision to San Jose State's Welvin Stroud. A year later, he returned to the championship round and defeated Washington State's Darrel Whitmore at Nevada's Old Gym to earn Nevada's first NCAA title in boxing. In 1960, Bliss advanced to the title match again and fell to Wisconsin's Charlie Mohr but was named the Outstanding Sportsman of the championship. After college, he competed in 1960 Olympic Qualifier in San Francisco but was forced to withdraw after a head butt in the semifinals. Bliss went on to work in the casino industry, spending 40 years at the Cal Neva. The last surviving member of the inaugural Hall of Fame class, Bliss passed away in September of 2020.

Remembering the Akičhitas - Warriors By Native Hope

Over the centuries, Native American akičhitas (warriors) watched over their oyates (tribes). They protected their people and helped in times of strife — it was the warriors' job to ensure the survival of the community. Perhaps, this is why Native Americans view military service "as a continuation of the warrior's role in Native cultures."

Pilamaya to all the veterans who continue to give of themselves to assist their communities and honor their fallen brothers and sisters.
