Illinois returns stolen land to Prairie Band Potawatomi Nation

The Prairie Land Potawatomi Nation has reclaimed land in Illinois that was promised to the tribe's leader 175 years ago but stolen by the federal government 20 years later

By JOHN O'CONNOR Associated Press March 25, 2025, 11:47 AM

SPRINGFIELD, Ill. -- The Prairie Land Potawatomi Nation has reclaimed land in Illinois that was promised to the tribe's leader 175 years ago but stolen by the federal government 20 years later.

A law signed by Gov. JB Pritzker last week transferred Shabbona Lake State Recreation Area, 1,500 acres (607 hectares) in north-central Illinois.

"We are proud to once again call this land home," said Joseph "Zeke" Rupnick, chairman of the Prairie Band Potawatomi Nation based in Mayetta, Kansas.

The action returns to the Potawatomi territory in the same area that was ceded to Chief Shab-eh-nay in a treaty with the U.S. government in 1829. Nothing ever altered that treaty, but when Shab-eh-nay and his people left for several years to visit family in Kansas, the government sold the land to white settlers.

It's not entirely the same soil that the U.S. took from Chief Shab-eh-nay. The boundaries of his original 1,280-acre (518-hectare) reservation now encompass hundreds of acres of privately owned land, a golf course and county forest preserve. Returning the original land would undoubtedly put the transfer into an interminable legal wrangle.

"This moment reflects the power of collaboration and the shared desire to build a future rooted in justice and respect," Rupnick said. "Illinois has shown true courage and vision by leading the way in the Land Back movement, demonstrating that healing and reconciliation are possible."

The land will stay open to the public as a park, with the state providing maintenance.

Rupnick for years has traveled repeatedly from Kansas to Illinois to negotiate with local and state governments, provide equipment to help clean up after storms and speak with neighbors, many of whom fear changes will come to the park that will disrupt their lives. Rupnick told lawmakers last spring it made no sense to install a casino because of the number of state-sanctioned gambling houses in operation.

He did not rule out constructing a hotel, however, noting that the park, 68 miles (109 kilometers) west of Chicago, has 150 campsites, draws 500,000 visitors a year, and the closest lodging is a 20-minute drive away.

*Just for fun: The US businesses still [using typewriters](#).*

*'We use them every day': In some parts of the US, the clack of typewriter keys can still be heard'*

Com

puters and smartphones might be where most writing is done these days, but typewriters still have work to do in the US.

<https://www.bbc.co.uk/future/article/20250321-the-people-who-still-use-typewriters>

## Greenpeace Forks Out The Green

- A North Dakota jury determined yesterday that [Greenpeace must pay hundreds of millions of dollars](#) to the pipeline company Energy Transfer. The Dallas-based company (which is worth about \$70 billion) sued Greenpeace for defamation and orchestrating criminal behavior by protesters at the Dakota Access pipeline in 2016 and 2017.
- Energy Transfer claimed the organization “incited” people to protest by using a “misinformation campaign.” Constitutional experts warned that such a verdict could have negative consequences for free speech, and Greenpeace said the ruling was aimed at “destroying the right to peaceful protest.”

## Wired is dropping paywalls for FOIA-based reporting. Others should follow Extract:

“This approach makes [a lot of sense](#) from the standpoint of civil duty. They’re called public records for a reason, after all. And access to public documents is more important than ever at this moment, with government websites and records disappearing, Elon Musk’s Department of Government Efficiency doing its best to operate outside the public’s view, and the National Archives in disarray.”

[https://freedom.press/issues/wired-is-dropping-paywalls-for-foia-based-reporting-others-should-follow/?\\_kx=zWwh6B\\_OYdk6NsB3ORi543rf\\_5DyvlOwx3UPABdXzhl.VVEwpW](https://freedom.press/issues/wired-is-dropping-paywalls-for-foia-based-reporting-others-should-follow/?_kx=zWwh6B_OYdk6NsB3ORi543rf_5DyvlOwx3UPABdXzhl.VVEwpW)

**The MacArthur Foundation announced it would be increasing its giving for the next two years in response to a “crisis” of funding for foreign aid and federal grants.**

## Global population data is in crisis – here’s why that matters

“When people vanish from data, they vanish from policy. When certain groups are systematically undercounted – often minorities, rural communities or poorer people – they become invisible to policymakers. This translates directly into political underrepresentation and inadequate resource allocation.”

[https://theconversation.com/global-population-data-is-in-crisis-heres-why-that-matters-251751?utm\\_source=firefox-newtab-en-us](https://theconversation.com/global-population-data-is-in-crisis-heres-why-that-matters-251751?utm_source=firefox-newtab-en-us)

## **Tenochtitlan, the Aztec Venice of Mesoamerica**

Tenochtitlan was the capital city of the Aztecs, founded around 1325 on an island in Lake Texcoco, in what is today Mexico. It was a major political, economic, and religious center until its destruction by the Spanish in 1521. This video explores the marvels of the city, which began as an island but grew via causeways and in-filled land and culminating in a North American Venice.

The ancient crops we've forgotten how to grow

Open link on [youtube.com](#)

Roughly half of all world calories today stem from maize, wheat, and rice. But for most of history, plants were domesticated in highly local places. This video dives into the scientists learning about crops no longer highly in use that once fueled entire civilizations in North America. Some forgotten crops include pitseed goosefoot, maygrass, and sumpweed.

## **How did Polynesian wayfinders navigate the Pacific Ocean?**

Ancient Polynesian navigators use the sun, moon, stars, clouds, currents, and more to sail the seas. Peoples of Southeast Asia began their voyages to the region now known as Polynesia in roughly 1500 BCE. They would settle a vast area of 15 million square miles including hundreds of islands, moving from islands due to overpopulation or war. Such voyages dwindled in 1300 CE as societies became more rooted.

## **Tooth gems and fresh breath: Ancient Mayan dentistry**

Open link on [science.org](#)

The ancient Maya adorned their teeth with gemstones, believing it purified their breath and linking them to the divine. Recent analysis suggests the sealant used to attach these stones may have also had therapeutic properties, possibly preventing infections. Researchers found plant resins and gums in the sealants, with some containing compounds from pine trees known for their antibacterial properties. Learn more of the evidence around Maya dental practices [here](#).

## Navajo Nation Keeps 5,000 Years of History Alive in This Sacred Canyon Deeper Than the Empire State Building

## Breakthrough DNA Analysis Reveals Everyone on Earth Shares Genes from Two Ancient Populations

### In a nutshell

- All modern humans share DNA from two ancient populations that split 1.5 million years ago and reunited through interbreeding about 300,000 years ago.
- The genetic mixture is approximately 80% from one ancient population and 20% from another, forming a foundation that all humans share regardless of ethnicity or geography.
- This discovery rewrites our understanding of human evolution, revealing a complex history of separation and reunion that predates the emergence of our species.

**CAMBRIDGE, England** — Before there was modern humanity, there was a genetic divorce and remarriage that shaped us all. Cambridge University researchers have uncovered evidence that two distinct populations of ancient hominins, separated for over a million years, before reuniting around 300,000 years ago. It's a missing chapter of evolution that left its mark in the DNA of every human alive today.

<https://www.msn.com/en-us/news/technology/breakthrough-dna-analysis-reveals-everyone-on-earth-shares-genes-from-two-ancient-populations/ar-AA1BaXe1?ocid=msedgdhp&pc=SMTS&cvid=e4d602ad35114930e744c1bd4de4bd86&ei=19>

*In the past, there were many conversations about wouldn't it be nice to be able to talk to someone seven generations past. Besides video, here's another way.*

I also knew the religious fervor behind the policies and practices -- a fervor backed by money. On the day I left my experiment, I stopped to absorb the forest's wisdom. I walked up to an elder birch along the Eagle River where I had collected the soil for transferring to the planting holes. Running my hands across the papery bark stretched across its wide, sturdy girth, I whispered the tree thanks for showing me some of its secrets. For saving my experiment.

"Then I made it a promise.

"A promise to learn how trees sense and signal other plants, insects, and fungi. To get the word out. The death of fungi in the soil, and the breakdown of the mycorrhizal symbiosis, held answers about why the little yellow spruce in my first plantations had been dying. I'd figured out that accidentally killing the mycorrhizal fungi also killed trees. Turning to the native plants for their humus, and putting the fungi in the humus back into the plantation's soil, helped the trees."

Lax recalls what Albert Einstein once said about the legacy of the atomic bomb. "When he was asked what weapons will be used in World War III, he said, 'Well I don't know, but I can tell you what weapons will be used in World War IV.'" Lax pauses to let Einstein's answer sink in. "Stones."

How Lee Zeldin went from environmental moderate to dismantling the EPA

“When President Trump’s cabinet secretaries clashed with Elon Musk this month over the billionaire’s chain saw approach to shrinking government, Lee Zeldin, the administrator of the Environmental Protection Agency, made it clear where he stood. Mr. Musk had just traded barbs with Sean Duffy, the transportation secretary, and Marco Rubio, the secretary of state. Things were tense. That’s when Mr. Zeldin chimed in to say he had no complaints about Mr. Musk, according to three people briefed on the March 6 meeting. It was a telling moment for Mr. Zeldin, who has evolved from moderate blue state Republican to full MAGA warrior, taken to dismantling the agency he oversees with zeal. ... ” [Read more from the New York Times.](#)

President Trump’s latest executive order has taken aim at the Smithsonian Institution, accusing the organization of promoting a “divisive, race-centered ideology.” The order aims to restore the Smithsonian to a “symbol of inspiration and American greatness.” It also calls for monuments that have been removed or altered since 2020 — when the reckoning against Confederate icons began — to be replaced.

Here’s a closer look at the directive; how it could impact the Smithsonian and its 21 prominent museums, libraries, and research centers; and [how historians are responding.](#)

Seven Colorado River states have mere weeks to reach water agreement after long impasse

“Colorado River states have weeks remaining to resolve deep divides over how to manage the river for years to come, officials at a water conference in southwestern Colorado said Friday. “We have a real ticking-clock problem in this basin right now,” Chuck Cullom, executive director of the Upper Colorado River Commission, told an audience of almost 200 water experts, ranchers, water managers and others gathered Friday for the Southwestern Water Conservation District’s annual seminar. “Folks are working hard.” Basin officials must submit a joint management proposal by May for it to be considered in the larger federal process that will decide how the river is managed. A seven-state agreement would send a clear signal to federal decision-makers about how the basin wants to manage its own water future. But for months, basin state officials at the center of negotiations have been at odds. ... ” [Read more from the Colorado Sun.](#)

Trump’s denial of Mexico’s Colorado River request sparks concerns over future water negotiations

“The Trump administration’s unprecedented decision to deny a delivery of water to Mexico is raising alarm among experts, who fear it could jeopardize future cross-border negotiations in an

increasingly thirsty region. The refusal, which marked the [first such rejection](#) in 81 years, pertained to a special request from Mexico for the transfer of additional Colorado River water to the city of Tijuana. Defending this decision, the U.S. State Department accused Mexico of failing to uphold commitments to Texas included in a 1944 water-sharing treaty. Stephen Mumme, a political scientist at Colorado State University, characterized the move as both irrational and potentially harmful. Mumme, who is also a nonresident fellow at Rice University's Baker Institute for Public Policy, said that if he was one of the seven Colorado River basin state commissioners, he would be "really ticked off right now," as those states are in the throes of long-term renegotiations with Mexico regarding their shared resource. ... Federal hearing to take up hotly debated issue of wetlands protections

"In a court hearing that could have implications for the fate of federal protections for US wetlands, lawyers for an Iowa farmland owner will face off on Monday against the federal government and environmental advocates over the constitutionality of the Farm Bill's hotly debated "Swampbuster" law. The hearing in the case pits CTM Holdings LLC against the US Department of Agriculture (USDA) and several organizations that intervened in the case in support of USDA, and addresses a provision of the US Farm Bill dealing with wetlands management. First introduced by Congress in 1985 after more than half of all US wetlands had been drained or filled, the provision prohibits farmers from using designated wetlands on their property if they want to be eligible for crop insurance subsidies, farm loans and other federal benefits. The measure aims to prevent farmers from draining, filling in or otherwise altering wetlands, which provide critical habitats for fish and waterfowl, help mitigate flooding and sequester carbon. The provision currently protects about three-quarters of remaining wetlands in the contiguous US – at least 78 million acres. ... " [Read more from The New Lede](#).

Ancient Architecture Might Be Key to Creating Climate-Resilient Buildings

Vernacular architecture is a way to use a region's heritage and resources to build strong homes and cities.

Layoffs begin at US health agencies responsible for research, tracking disease and regulating food Extract:

An email viewed by The Associated Press shows some senior-level employees of the Bethesda, Maryland, campus who were placed on leave were offered a possible transfer to the Indian Health Service in locations including Alaska and given until the end of Wednesday (today) to respond.

“They may as well be renaming it the Department of Disease because their plan is putting lives in serious jeopardy,” (Senator Patty Murray) said Friday (3.28.25)
